## Pixel Picture: Snake

The numbers on each row (or column) tell you the number of black cells in the row (column), in each group of black cells. So if the numbers next to a row are 2,4,5 it means that row has a block of 2 black cells, a block of 4 black cells and a block of 5, in that order. Each block is separated by one or more white cells. Columns are encoded in the same way.
